

# Printing Out all Available Letters

---

 [courses.edx.org/courses/course-v1:MITx+6.00.1x\\_6+2T2015/courseware/sp13\\_Week\\_3/sp13\\_Problem\\_Set\\_3/](https://courses.edx.org/courses/course-v1:MITx+6.00.1x_6+2T2015/courseware/sp13_Week_3/sp13_Problem_Set_3/)

Week 3 > Problem Set 3 > Printing out all available letters

(5/5 points)

Next, implement the function `getAvailableLetters` that takes in one parameter - a list of letters, `lettersGuessed`. This function returns a string that is comprised of lowercase English letters - all lowercase English letters that are **not** in `lettersGuessed`.

Example Usage:

```
>>> lettersGuessed = ['e', 'i', 'k', 'p', 'r', 's']
>>> print getAvailableLetters(lettersGuessed)
ab cd fghjlmnoqtuvwxyz
```

Note that this function should return the letters in alphabetical order, as in the example above.

For this function, you may assume that all the letters in `lettersGuessed` are lowercase.

**Hint:** You might consider using `string.ascii_lowercase`, which is a string comprised of all lowercase letters:

```
>>> import string
>>> print string.ascii_lowercase
abcdefghijklmnopqrstuvwxyz
```
